Introduction

The following bibliography, including 822 items, is a continuation and an extension of the previous bibliography presented at Ljubljana in July 2003, in the framework of the 9th International Conference of Facet Theory.

The 2003 version began with the use of previous bibliographies, such as: Kantebeen, T., Reenders, T., Hox, J., & Shye, S., Facet Theory: A Selected Bibliography, in Hox, J.J., Mellenbergh, G.J. and Swanborn, P.G. (Eds, 1995). *Facet Theory Analysis and Design*, p. 285; Guttman R. & Goldzweig G., Facet Theory 1996 – 2001: A progress report, in Elizur D. (Ed) *Facet Theory: Integrating Theory Constructions with Data Analysis* (2001, pp 3-6); and Levy S. (Ed,) *Louis Guttman on Theory and Methodology: Selected Writings* (1994).

This updated bibliography is the result of an intensive internet search and lists, provided by FTA members, of their relevant publications. We hope that the bibliography will encourage additional colleagues to send their references in the future. Although this bibliography is the largest by far in this field, it is still incomplete.

In the meantime, the FT contributions are becoming very impressive. We found 369 journal articles and 453 articles or chapters in books published during the 65 years of the FT's existence. On average, there have been an average of twelve articles published yearly since the beginning of Facet Theory in 1941. During the last 13 years, this average has increased to some 39 articles per year. This data indicates that Facet Theory is beginning to be more widely accepted in the academic community. The following Table presents the number of publications every year from 1941 till 2005.
